

Amendments To The Abstract:

In the English translation document, please amend the section heading at page 22 line 1, as follows:

--ABSTRACT

The invention relates to an inventive method and a corresponding control system according to which: during the operation of the technical installation, each component that is in operation or out of commission triggers an evaluation of at least one other component by means of a value; the values of each component are totalled and the totalled values are used to determine the next components that are to be activated or deactivated. At least one initialisation value is assigned to at least one component and added to the totalled values of the component.
